

What is BioProtect formula

The dusty and neglected facades of buildings are usually the result of excessive atmospheric pollution, human activities and their interference with the environment. Dirty-gray precipitation often appears on the surface of building walls. This is already the result of the development of microorganisms – fungi and algae – which are invisible to the naked eye. Microorganisms can only grow in specific conditions favourable to them. Unprotected plaster is exposed to their action and beyond the negative impact on the aesthetics of the facade, also entails the danger of its inevitable degradation. The use of Ceresit plasters and paints with the BioProtect formula on the building facades protects elevations for many years and helps to maintain their aesthetics. Active substances existing in the products actively protect the facades against the development of microorganisms and their destructive influence. The durable and beautiful appearance remains pleasing to the eye for years. The effectiveness of the BioProtect formula products was confirmed by the appropriate permission of the Minister of Health.
